

SYED MAAZ ATHAR

Full Stack Developer • Data Science • Application Security • CSE 2026

syathedar@gmail.com | syedathar-portfolio.pages.dev | Bengaluru, India

CSE 2026 graduate with 6+ months of production experience shipping REST APIs and React UIs on a live platform. Hands-on across full stack (Node.js, Django, MySQL), ML pipelines (96% accuracy), and system-level security hardening. Open to dev, data, or technical support roles.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS

Frontend: React.js, responsive UI, component architecture, cross-browser debugging

Backend: Node.js, Django, REST API design, LAMP stack (Linux / Apache / MySQL / PHP)

Data / ML: Pandas, NumPy, Scikit-learn, ensemble modelling, data pre-processing

Security: Kali Linux, WAF (SafeLine), SSL/TLS, Docker, log analysis, OWASP Top 10

Tools: Git, VS Code, VirtualBox, Docker

WORK EXPERIENCE

Full Stack Developer & Data Science Intern — Skyllx Technologies

Bengaluru • Jan 2026 – Present

Live pharma simulation platform • Team of 7–8 • cologylabs.com

- ▶ Unblocked 3 pre-deployment milestones by building Node.js REST API endpoints consumed directly by the React.js frontend on a live production codebase.
- ▶ Delivered React.js UI components end-to-end — from feature planning through code review — in a concurrent, cross-functional team of 8.
- ▶ Eliminated 5+ data integrity issues ahead of launch via MySQL schema changes and query optimisations that supported new features without regressions.
- ▶ Hardened the production web app by auditing API endpoints and frontend inputs, reducing attack surface before launch.

Tools: React.js, Node.js, MySQL, JavaScript, REST APIs, Git

PROJECTS

LAMP Lab: Web Application Security & Hardening

Aug – Sep 2025

- ▶ Achieved zero critical vulnerabilities post-config by implementing SSL/TLS, firewall rules, and WAF (SafeLine/Docker) on a self-hosted LAMP stack; manually tested OWASP Top 10 categories.
- ▶ Built a log-analysis workflow for faster incident triage across frontend, backend, and infrastructure in one pass.

Tools: Kali Linux, Apache, MySQL, PHP, Docker, VirtualBox, SafeLine WAF

Blood Cancer Detection — Hybrid Ensemble Deep Learning

Mar – Jun 2024

- ▶ Achieved 96% classification accuracy on a 4-member Python ML pipeline, outperforming a single-model baseline by ~8 percentage points; managed pre-processing and validation with Scikit-learn.

Tools: Python, Scikit-learn, NumPy, GitHub

E-Commerce Grocery Web Application

Nov – Dec 2023

- ▶ Built a full-stack grocery app with login/session management in a 4-member team; improved simulated user retention by 15% through UX and session stability improvements.

Tools: HTML, CSS, JavaScript, Git

EDUCATION

B.E. Computer Science Engineering

Aug 2022 – May 2026

Ghousia College of Engineering, VTU • Bengaluru

Coursework: DBMS, AI & ML, Data Structures & Algorithms, Cloud Computing, Operating Systems

CERTIFICATIONS

Tata Cyber Security Analyst — Forage (Sep 2025) • Deloitte Cyber Security — Forage (Jul 2025) • Deloitte Data Analytics — Forage (Jul 2025) • BCG Gen AI — Forage (Sep 2025) • AWS Generative AI Intro (Aug 2025)
